"You" – Personal vCard Template

Created: July 4, 2012
By: UXbarn
Email: **support@uxbarn.com**

"Thank you for purchasing my theme. If you have any questions that are beyond the scope of this help file, please feel free to email via my user page contact form here. Thanks so much!"

"**You**" is a personal vCard template that was created with the concept of formally clean and simple to use. In addition, it also comes with a neat style plus 4 color presets and 5 backgrounds for you to customize. You can use this template for your own online personal or business profile and I hope everyone would enjoy using this theme ☺
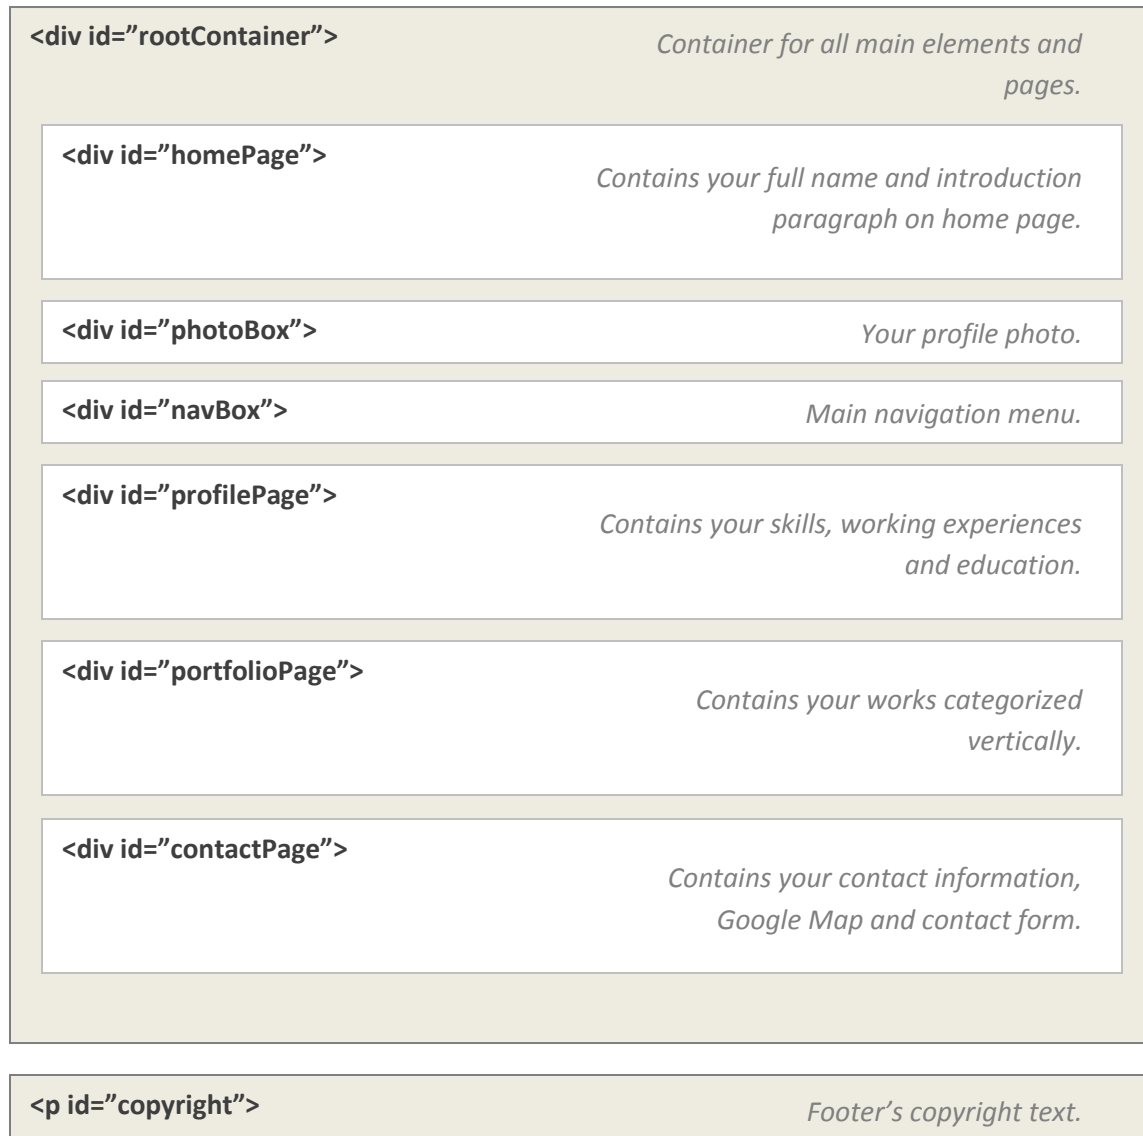

Features

- Neat, simple and clean design
- Large profile photo
- Easy for customization
- Build-in 4 color presets + 5 backgrounds
- Cross-browser compatibility
- Powered by jQuery
- Working AJAX contact form
- Well documented

Table of Contents

A) HTML Structure

This theme is a fixed layout that mostly uses "<div>" tags for partitioning the elements and pages. You can see the entire structure by a figure below.

<div id="rootContainer"> *Container for all main elements and pages.*

<div id="homePage"> *Contains your full name and introduction paragraph on home page.*

<div id="photoBox"> *Your profile photo.*

<div id="navBox"> *Main navigation menu.*

<div id="profilePage"> *Contains your skills, working experiences and education.*

<div id="portfolioPage"> *Contains your works categorized vertically.*

<div id="contactPage"> *Contains your contact information, Google Map and contact form.*

<p id="copyright"> *Footer's copyright text.*

B) CSS Files

All CSS files are in "/css" directory and they are as followings:

- **colorbox.css** – styles for ColorBox plugin.
- **jpreloader.css** – styles for jPreLoader plugin.
- **layout.css** – main CSS file for this theme and used to style all pages with IDs and Classes.
- **layout-ie8.css** – additional CSS file just only for IE8 support.
- **mosaic.css –** styles for Mosaic plugin.
- **reset.css** – used to reset all browsers' build-in styles.
- **tip-twitter.css** – styles for Poshy Tip plugin.
- **typo.css** – used to style all typography-related elements in pages.
- **ui.totop.css** – styles for UItoTop plugin.
- **validationEngine.jquery.css** – styles for Inline Form Validation Engine plugin.

There are also 4 additional CSS files in "/css/colors" directory for the color presets which are:

- green.css
- grey.css
- orange.css
- red.css

See more in the Customization section for how to change the color using the color presets.

C) JavaScript Files

All JavaScript files are in "/scripts" directory and they are as followings:

- **config.js** – theme's configuration file.
- **custom.js** – theme's animations and functions.
- **jpreLoader.min.js** – functions for jPreLoader plugin.
- **jquery.color.js** – functions for jQuery Color.
- **jquery.colorbox-min.js** – functions for ColorBox plugin.
- **jquery.easing.1.3.js** – functions for jQuery Easing movement.
- **jquery.poshytip.min.js** – functions for Poshy Tip plugin.
- **jquery.ui.totop.min.js** – functions for UItoTop plugin.
- **jquery.validationEngine.js** – functions for Inline Form Validation Engine plugin.
- **jquery.validationEngine-en.js** – localization for Inline Form Validation Engine.
- **jquery-1.7.2.min.js** – jQuery engine.
- **mosaic.1.0.1.min.js** – functions for Mosaic plugin.

In summary, only the "custom.js" file belongs to the theme's animations and functions for all pages. Other files are for the jQuery plugins. There is also another "PIE.htc" file of CSS3PIE in "/scripts/CSS3PIE" that is used for CSS3 compatibility.

D) Customization

This section will help you about how to customize the theme with your information. Let's see one by one.

a. Changing Theme Color

Open "index.html" file and look for the line:

```html
<link id="color" href="" rel="stylesheet" type="text/css" />
```

All you need to do is just enter one of the following values in "href" attribute.
- "css/colors/green.css"
- "css/colors/grey.css"
- "css/colors/orange.css"
- "css/colors/red.css"

For example, if you want green color scheme, the line will be like:

```html
<link id="color" href="css/colors/green.css" rel="stylesheet" type="text/css" />
```

b. Changing Background

Open "/css/layout.css" file and look for these lines:

```css
/******************************************************/
/*   Main containers                                 */
/******************************************************/

body {
    background: #E9E9E9 url('../images/bg/brick.png');
    color: #666;
    font-family: "Lucida Sans Unicode", "Lucida Grande", Arial;
    font-size: 62.5%;
}
```

Then you just change the file name of "brick.png" to be one of these followings:
- "emboss.jpg"
- "large-leather.jpg"
- "lghtmesh.png"
- "wood.jpg"

c. Map Rendering

You surely want to set the map of your office and there are 2 options for you – use your own image file or use Google Map with your own address.

First option is to replace the Google Map with your own image file – dimensions of *330px* width and *550px* height are recommended. Start by opening the "index.html" file and look for the line:

```
<!-- Google map -->
<div id="googleMap"></div>
```

Then just add HTML "<img>" tag containing a path to your image file. The result may like:

```
<!-- Google map -->
<div id="googleMap">
    <img src="path to your file" />
</div>
```

Next thing to do is open "/scripts/config.js" file, then look for the line:

```
// Set it as 'true' or 'false'
useAutoMap : true,
```

You have to change from "true" to "false" to disable Google Map and that's it!

Second option is to use default Google Map. Start by making sure that the above value, "useAutoMap" is set to "true". Then enter your address to the line:

```
address : '217 West 42nd Street, New York, NY 10036'
```

As a result, the Google Map will be automatically created! ☺

d. Contact Form Configuration

The form and functions are ready to work. You just need to configure a bit to use your own information like SMTP server account for sending email and your receiving email address.

Firstly, open the "/php/sendemail.php" file and as looking through it, you can see the comments with short descriptions at each line. The first 2 lines that you need to set are:

```php
$site_owners_email = 'your@mail.com'; // Replace this with your own email address
$site_owners_name = 'uxbarn'; // Replace with your name
```

Change "your@mail.com" and "uxbarn" to your own email and name. Next line to set is:

```php
$mail->Subject = "[You] Message from my contact form";
```

This is the subject of email that will be sent to your inbox from the contact form. Then look at these 3 lines of codes:

```php
$mail->Host = "smtp.yoursite.com"; // Replace with your SMTP server address
$mail->Username = "user@smtp.com"; // SMTP username
$mail->Password = "yourpassword"; // SMTP password
```

"Host" is your SMTP server address that will be used for sending email. "Username" and "Password" are your SMTP account information to be used. Just change these values to your own account.

Now your contact form would be fully ready to work ☺

E) Sources and Credits

I have used icons and jQuery plugins as followings:

    a. Icons
- i. Social network icons
  http://www.designerschair.com/freebies/mono-dc-monochrome-social-icons/
- ii. Contact and link icons
  http://www.brankic1979.com/icons/

    b. jQuery Plugins
- i. jPreLoader Plugin
  http://www.inwebson.com/jquery/jpreloader-a-loading-screen-to-preload-images/
- ii. ColorBox Plugin
  http://www.jacklmoore.com/colorbox
- iii. Poshy Tip Plugin

Thank You!

Once again, thank you so much for purchasing this theme. As I said at the beginning, I'd be glad to help you if you have any questions relating to this theme. No guarantees, but I'll do my best to assist. If you have a more general question relating to the themes on ThemeForest, you might consider visiting the forums and asking your question in the "Item Discussion" section.
